PROFESSIONAL SUMMARY

Engineer with 15+ years delivering software directly into client environments, most of it in Nairobi and across African markets, where the integration surface is other people's systems and the data arrives messy. Runs NARS Technical Services, shipping for several enterprise clients at once: settlement reconciliation across roughly 180 accounts in 38 African countries, a 12,000-document migration into a client's ERPNext instance, document extraction synced into a client's system of record, and eTIMS tooling against more than 20 Kenya Revenue Authority endpoints for electronic tax-invoice compliance. Earlier, led deployment of secure high-availability networking infrastructure on client premises and built payment systems at Cellulant for enterprise and government programmes. Kenyan, based in Nairobi at UTC+3, native Swahili and English, working French. Skilled in Python, FastAPI, React, TypeScript, Flutter, SQL, Docker and REST API integration.

TECHNICAL SKILLS

Languages and Frameworks: Python, TypeScript, JavaScript, Dart, PHP, Solidity, SQL, Bash, FastAPI, React, Next.js, Node.js, Wasp (Open SaaS), Flutter, FlutterFlow

Data and Databases: PostgreSQL, MySQL, SQLite, Redis, vector embeddings, data extraction pipelines

Domains and Leadership: Client-facing delivery, government systems integration, multi-tenant deployment, LLM evaluation design, AI agent orchestration, fintech and payments, M-Pesa integration, KRA eTIMS compliance, systems architecture, agile team leadership

Cloud and DevOps: AWS, Google Cloud Platform (GCP), Fly.io, Docker, CI/CD, GitHub Actions, REST APIs

AI, LLM and Voice: LLM evaluation and evals (LLM-as-judge grading), LangGraph, DSPy, Mastra, n8n, Claude API (Anthropic), OpenAI, Model Context Protocol (MCP, built a FastMCP server), Retrieval-Augmented Generation (RAG), Qdrant, ChromaDB, PGLite, Ollama, Deepgram (speech-to-text), ElevenLabs (text-to-speech), LiveKit (WebRTC), VAPI

PROFESSIONAL EXPERIENCE

Chief Executive Officer, NARS Technical Services

March 2022 to Present | Nairobi, Kenya

- Designed and shipped a production LLM-as-judge evaluation system using DSPy, grading open-ended learner answers across multiple rubric dimensions with confidence scoring and escalation to human review, inside a voice-first AI learning platform built on LiveKit (WebRTC), LangGraph, Deepgram, and ElevenLabs, with provider failover across OpenAI, Google Cloud Speech, and Soniox, subscription billing, an MCP server exposing the platform to external agents under the same scope enforcement as the REST API, and over 2,300 automated tests with grading and speech-to-text accuracy ratcheted into CI so a regression fails the build, deployed on Fly.io.
- Architected a multi-channel AI lead-nurturing engine using LangGraph and FastAPI, coordinating voice (VAPI), WhatsApp, and SMS channels with Claude conversational logic, a Qdrant retrieval-augmented generation (RAG) knowledge base, and M-Pesa-integrated multi-tenant billing serving multiple enterprise clients.
- Developed a settlement reconciliation platform using FastAPI, React, and LangGraph, automating extraction and aggregation of bank settlement data across 180 accounts in 38 African countries, supporting NIBSS, KEPSS, PAPSS, and SWIFT formats.
- Engineered an enterprise data-migration pipeline ingesting approximately 12,000 legacy financial documents into ERPNext through a four-stage parser chain with LLM fallback (Claude and Cerebras) and vector-embedding semantic deduplication using ChromaDB.
- Created an AI content management agent using Mastra and the Claude API to autonomously grade, optimize SEO and GEO, and curate over 1,200 blog posts for an electric vehicle publication focused on developing economies.
- Built Run.KE, a running events platform for Kenya using Wasp 0.21, React, Node.js, and Prisma, featuring event discovery and admin tooling with LLM-vision parsing of stylized event flyers, running-track and gym directories built on OpenStreetMap data, a route tool, Cloudflare R2 presigned uploads, Cloudflare Turnstile bot protection, and scheduled analytics jobs.
- Built an agentic content manager (Mastra and Claude API) for a health publication that grades drafts across mission-alignment and technical-quality dimensions, optimizes SEO, and publishes to a Ghost CMS blog under YMYL and E-E-A-T editorial standards.
- Integrated gbrain, a local-first knowledge-graph memory system served over the Model Context Protocol (MCP), across my most important repositories as a working knowledge base, writing the ingestion, rescan, remote-sync and health-check tooling around it and the query playbooks it is used through. Provides semantic retrieval over local Ollama embeddings in PGLite, graph traversal, entity and fact extraction, and contradiction detection over the corpus.
- Built a tender document automation tool using Python, PyMuPDF, and the Claude API, and designed eTIMS integration tooling for Kenya Revenue Authority electronic tax-invoice compliance across more than 20 API endpoints.
- Engineered a DeFi arbitrage trading bot using Solidity, Python, and Web3.py, and led deployment of secure, high-availability networking infrastructure for enterprise clients.

Head of Mobile, TradePulse Inc.

January 2024 to August 2025 | Nairobi, Kenya

- Led end-to-end Flutter development of the TradePulse Mobile App, enabling agro-processors to manage inventory, create orders, accept payments, and generate reports.
- Spearheaded React and Next.js development of the TradePulse Sourcing Platform, a CRM-driven B2B system that streamlined raw-material sourcing between buyers and suppliers and scaled regionally to hundreds of daily transactions.

Team Leader, Innovation and Software Engineer at Radio Africa Group

May 2016 to April 2022 | Nairobi, Kenya

- Directed agile teams building consumer digital products reaching millions of users, including a music streaming platform with real-time recommendations, a digital newspaper with subscriptions, and interactive games and quizzes.
- Championed modern software engineering practices and cloud infrastructure to accelerate development cycles and digital transformation.

Software Engineer, Cellulant Kenya

November 2011 to April 2016 | Nairobi, Kenya

- Developed and maintained bulk payment systems for enterprise and government clients, enabling high-volume secure transactions.
- Built payment systems powering the Growth Enhancement Support Program in Nigeria, connecting input suppliers to millions of farmers to deliver subsidies efficiently.

Bioinformatician at IITA, and Earlier Roles

2005 to 2011 | Nairobi, Kenya and Montreal, Canada

- Built data-mining and bioinformatics workflows for genomic data analysis at the International Institute of Tropical Agriculture (2010 to 2011).
- Earlier roles: Research Assistant at Innovative Health Research; Network Installations Coordinator at NARS Technical Services; Drupal Integrator at Koumbit Network (Montreal); Web Developer at Norpix Inc. and the Canadian Chemical Biology Network.

SELECTED PROJECTS

- **Settlement Reconciliation Platform**, 15-stage pipeline normalising ten settlement formats including M-PESA, MTN, Airtel, NIBSS, KEPSS, PAPSS, SWIFT MT940 and MT103, and ISO 20022 camt.053, across roughly 180 accounts in 38 African countries. Stack: Python, FastAPI, React, LangGraph.
- **ERPNext Accounting Ingestion**, 12,000-document financial data migration with LLM-fallback parsing and vector deduplication. Stack: Python, ChromaDB, Docling, Claude, Cerebras, ERPNext REST API.
- **Doc Sift**, Document extraction pipeline turning invoices, purchase orders, receipts and bank statements into structured records synced to the client's system of record, with an eval harness over the extraction built on hand-checked ground truth. Stack: TypeScript, LLM extraction.
- **Multi-Channel Voice Agent Engine**, Agentic voice, WhatsApp, and SMS lead-nurturing platform with RAG and M-Pesa billing. Stack: VAPI, Claude, Qdrant, MySQL, PostgreSQL, React, TypeScript.
- **TradePulse Sourcing Platform**, B2B supply-chain CRM for agricultural sourcing: role-based dashboards for administrators, agro-processors and suppliers, covering aggregated demand, supplier records, quote lifecycle, deals, orders, payments and wallets. Stack: Next.js 15, React, TypeScript.
- **Run.KE**, Running events platform for Kenya with event discovery and admin tooling, LLM-vision flyer parsing, track and gym directories, and a route tool. Stack: Wasp 0.21, React, TypeScript, Node.js, Prisma, Cloudflare R2, Turnstile.
- **Quizlar**, Voice-first AI learning platform with real-time WebRTC quiz sessions and FSRS spaced repetition, exposed to external agents through an MCP server. Stack: LiveKit, LangGraph, DSPy, FastMCP, Deepgram, FastAPI, Flutter, React, PostgreSQL.
- **Healthspan Content Agent**, Agentic content manager that grades drafts on mission-alignment and technical quality, optimizes SEO, and publishes to Ghost CMS. Stack: Mastra, Claude API, Ghost CMS, TypeScript.
- **Cross-repository knowledge base**, gbrain, a local-first MCP knowledge-graph memory system, integrated across my most important repositories, with the ingestion, rescan, sync and health-check tooling written around it. Stack: gbrain, PGLite, Ollama embeddings, MCP, Claude API.
- **Plopped**, Bristol-scale bowel health diary shipped solo to iOS: Premium subscription, engagement-gated ads, hands-free voice logging (on-device speech-to-text into LLM field extraction), biometric lock, timezone-aware reminders, offline-first local store. Stack: Flutter, Riverpod, Drift (SQLite), Firebase Analytics, AdMob, in-app purchase.

EDUCATION

BSc Biochemistry and Molecular Biology, Jomo Kenyatta University of Agriculture and Technology

McGill University, Biochemistry and Molecular Biology coursework, credits transferred to JKUAT

ADDITIONAL INFORMATION

Languages: Swahili (Native), English (Native), French (Working Proficiency)

Certification: Java Developer Certificate

Publication: Genomics and Potential Downstream Applications in the Developing World
